# OneDrive backup with 100% security

You've moved your data to Office 365 and enabled greater collaboration for your distributed teams and achieved seamless accessibility. That's great, but have you thought about the safety of your OneDrive data? BluVault helps you backup your Microsoft OneDrive data effortlessly to an alternate cloud target with total security and privacy.

SaaS data backups are an indispensable asset in any IT Administrator's toolkit. Whether it is to achieve regulatory compliance, protect against ransomware, defend against insider threats or just plain data recovery – a OneDrive backup is an absolute necessity.

And that's where BluVault for OneDrive data comes in.

## Automated OneDrive Backup

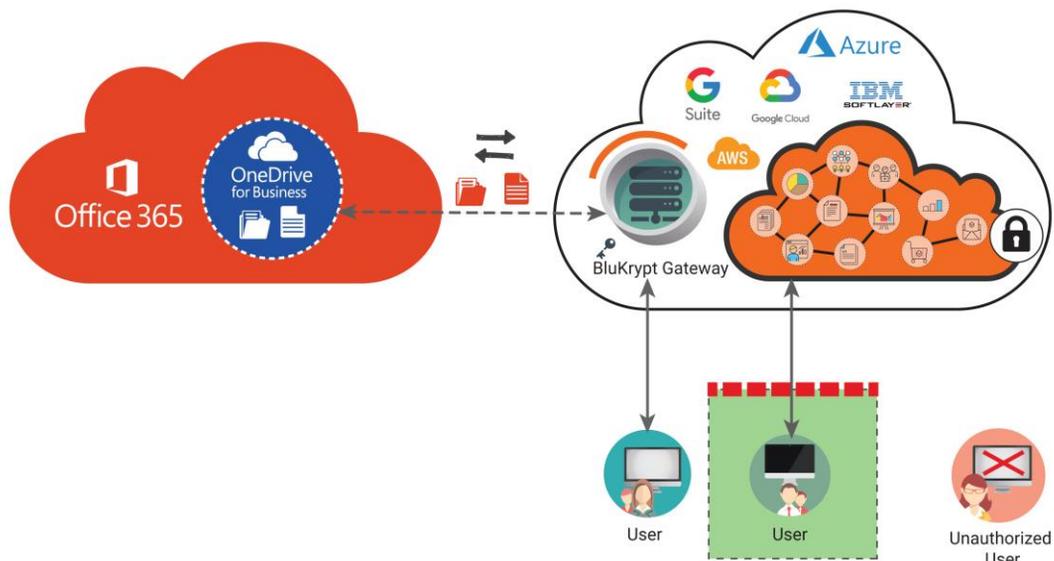

BluVault enables automatically scheduled backups that ensure that all OneDrive data is safely stored and easily recoverable. Granular restores enable you to get back even a single file or the entire drive

## Shared Responsibility Model

This is a fairly standard industry practice that is important to understand. Having your data in the cloud, doesn't necessarily mean you're automatically getting data protection. SaaS vendors draw a clear line where their responsibilities stop and the customers' begin. Generally SaaS/Cloud vendors take responsibility for certain things like uptime, infrastructure, and network availability – but customers remain responsible for the data that they store in the cloud and its security.

## Security, privacy and confidentiality

BluVault combined with BluKrypt, Parablu's Privacy Gateway, not only enables powerful encryption but also enforces a strict separation of duties. It also obfuscates file and folder names completely as well as perform file shredding, before writing backup data to cloud storage targets. With BluVault, you know your enterprise data is safe.

## End- to- End Encryption

Zero Knowledge Privacy is a tenet that all Parablu products are built on. This ensures that your data can be accessed only by you and nobody else – not the cloud vendor, not even us.

## Policy based management

Parablu's BluVault provides policy-based management that allows an administrator to easily control all elements of backup behavior – backup schedules, folders to include/exclude, file types to include/exclude, number of versions to retain, file size limits, user quota limits etc. Once these parameters are set, all OneDrive account pointed to the policy read these parameters and change their backup behavior in a matter of a couple of hours.

## Quick Recovery

Recovery time of your OneDrive files can be crucial to reducing downtime and ensuring your business doesn't suffer. BluVault enables you to recover your data according to your need at a single click and can be done easily by your team based on their requirements

## Hedge against SaaS lock-in

Don't have all your eggs in one basket! You don't have to feel locked in by a SaaS vendor ever. Always have a vendor neutral copy of your data in an alternate cloud. Choose from Microsoft Azure, Amazon S3, IBM SoftLayer, Google Cloud Platform etc.

## Regulatory Compliance & Governance

BluVault helps organizations achieve regulatory compliance. Regulations like SOX, HIPAA, GDPR and others have requirements around data protection and retention which BluVault can help meet. BluVault's reports and audit trail help to keep organizations on a defensible platform when it comes to regulatory compliance.

## Auditing and Reporting

Bluvault automatically audit logs all touch points in the system, and provides several reports which can be scheduled to run automatically or generated automatically. The enterprise class rigor, combined with granular insights makes backup management a cinch, while helping you stay compliant.

## Full and incremental backup

Allows an initial full backup and subsequent incremental backups. Backups can be scheduled as often as the administrator wishes – even multiple times a day.

## De-duplication & compression

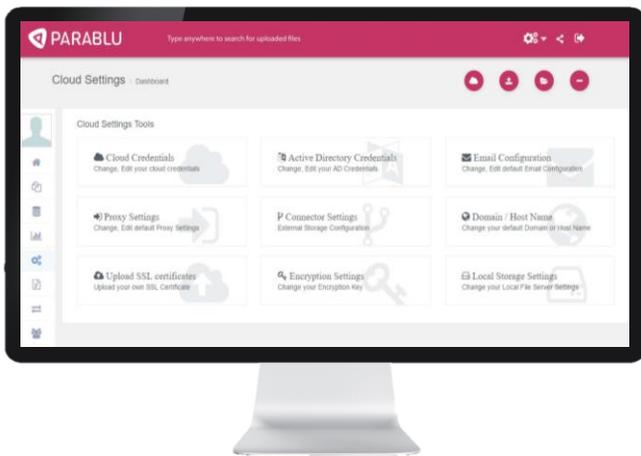

Smart sub-file level de-duplication combined with data compression saves network bandwidth and valuable storage space.

## Protection From Ransomware

BluVault is designed to protect you from ransomware attacks by ensuring that a copy of your data is always available to you – safe and secure. In case of an attack, you can simply restore your data and not be held hostage by the attacker.

## Self-service Interface

BluVault offers the flexibility to allow users to choose what to backup and do their own restores. BluVault's easy-to-use interface means that users can initiate their own restores without requiring an administrator to get involved. The self-service nature is fully controllable by the administrator though, and can be turned up and down based on the organization's appetite for self-service. Certain user groups can also be given privileges than others.

## Delegated Administration capability

Administrative roles with limited permissions can be assigned to selected users to allow them to perform specific administrative operations.

## Litigation hold

Allows administrators to assign special policies to identified users which align to Legal Hold requirements.

## Administrator Approved Deletion

Allows an Administrator to delete specific user files and folders from backup storage. Critical for GDPR compliance and to satisfy users' "right to be forgotten". Actions are audit-logged for compliance reasons.

## AD & Azure AD Support

Integrate easily with enterprise namespaces, such as Active Directory and Azure Active Directory. AD and AAD can be used not just for authentication but also to provision and deprovision users on an ongoing basis

## Vendor Agnostic

BluVault's vendor agnostic service ensures you can backup your OneDrive data to whatever cloud destination you choose. Invariable of your cloud destination, BluVault can work towards safely backing up your data.

## No Infrastructure headaches

BluVault for OneDrive is a cloud-cloud offering which means no on-premise infrastructure and no impact on your company network bandwidth for daily backups. Just schedule it, and forget it. You have other things to worry about!

## ABOUT US

Parablu, an award-winning provider of secure data management solutions, engineers new-age cloud data protection solutions for the digital enterprise. Our Privacy Gateway powered solutions protect enterprise data completely and provide total visibility into all data movement. Our suite of products include: BluKrypt - a Privacy Gateway that completely secures critical data on the cloud, BluVault - a powerful and secure data backup solution designed for the cloud, BluSync - a secure file sharing and collaboration solution for the agile enterprise, and BluDrive - a secure file transfer solution. These solutions easily integrate with your existing infrastructure making it a seamless solution for your enterprise data protection and management needs. Get a demo today.
