

BLUDRIVE

SECURE LARGE FILE
TRANSFER SOLUTION FOR
ENTERPRISES - FASTER
AND SAFER.

DATASHEET

Large file transfer made simple and easy.

BluDrive enables employees to securely transfer files of any size and type with colleagues, customers and partners. The flexibility to quickly transfer and share files ensures better collaboration resulting in higher efficiency and productivity.

BluDrive enables your employees to collaborate seamlessly across locations and allows universal access across multiple devices, so business gets done on the go. BluDrive supports mini-clouds allowing departmental teams to collaborate effectively. BluDrive leverages BluKrypt to make the solution unmatched in terms of security, privacy and control when deployed in public or hybrid cloud configurations. BluDrive works with several popular cloud storage providers seamlessly.

Secure sharing

Files that you choose to share are stored securely in the cloud without compromising privacy or confidentiality. The solution is scalable to address vast geographical spread and large user bases. BluDrive generates a link that you can copy into an email to send, or will even send the email for you. Worried that the link may end up in the wrong hands? No problem. Parblu gives you policy based sharing with password protection, read-only access, and even allows expiration of document links.

Mini-Clouds

Mini-Clouds are insulated folders to which only selected users have access. You can create mini-clouds for different teams within your business or groups of users with whom you want to share specific content. So, every team and every individual gets to see only the data you want them to see.

Remove cloud storage restrictions

BluDrive helps you overcome several limitations that file storage services in the cloud might impose. Filename, path size and special character limitations placed by services such as Microsoft One Drive for Business can now be a thing of the past.

File versions & flexible retention policies

BluDrive allows the IT administrator the option to maintain multiple file versions and control aging/retention of versions based on policy.

De-duplication & compression

Smart sub-file level de-duplication combined with data compression saves network bandwidth and valuable storage space.

Agent-less or web browser interface

BluDrive doesn't require any software on user endpoints, and can transfer even very large files using a web browser interface.

Policy based management

BluDrive provides for policy based management of important enterprise parameters such as file/folder inclusions and exclusions, file type selection, file size filters etc.

Single sign-on

SSO eliminates password reset phone calls, protects against unauthorized access, and integrates with your enterprise's LDAP or Active Directory.

ABOUT US

Parablu, an award winning provider of secure data management solutions, engineers new-age cloud data protection solutions for the digital enterprise. Our Privacy Gateway powered solutions protect enterprise data completely and provide total visibility into all data movement. Our suite of products include: BluKrypt - a Privacy Gateway that completely secures critical data on the cloud, BluVault - a powerful and secure data backup solution designed for the cloud, BluSync - a secure file sharing and collaboration solution for the agile enterprise, and BluDrive - a secure file transfer solution. These solutions easily integrate with your existing infrastructure making it a seamless solution for your enterprise data protection and management needs. Get a demo today.
